A PERIODIC TALE:

150 years and still up to date

Dr Stephen Mansell, Assistant Professor of Inorganic Chemistry

It has been 150 years since Mendeleev presented his Periodic Table, and how successful it has proved to be! I will talk you through how laying out the elements in a systematic fashion is used to make predictions of properties that might otherwise be unexpected, using examples from my own work from group 1 – the alkali metals – through to phosphorus and its similarities to carbon, as well as examples from the f-block and beyond!

Post Graduate Centre, Cairn Lecture Theatre
18:00 for tea and coffee **Lecture 18:30 – 19:30**

Followed by a wine reception
